

15 July 2025

Dear Customer,

Installation of electricity cables – Brington to Kimbolton

We manage the electricity network delivering power to your area and we will shortly be starting a project to provide a new connection for a customer in the area.

In partnership with our contractor, Ipsum, we are installing new underground electricity cables from RAF Molesworth and our substation in Stow Road, Kimbolton. Work is planned to start in Brington on 1 August with the whole project expecting to take 6 months to complete.

Where will the work take place?

A new cable is to be installed from RAF Molesworth to our Brington Substation on the High Street. An additional cable will then run from this substation to our substation on Stow Road, Kimbolton via B660.

In order to minimise disruption to the area, the cable route will circumnavigate Catworth, crossing private land to the west before rejoining the B660 to the south. Approved permits to work and traffic management can be viewed on <https://one.network/>.

How will I be affected?

Unfortunately, the road width through Brington is not wide enough to support these works and safe passage of vehicles. In order to work safely, a road closure will be required on Brington High Street/Brington Road

Brington High Street	1 Aug 2025 – 1 Sept 2025	Junction of Church Lane to junction of Hill Place
Brington Road	8 Sept 2025 – 28 Nov 2025	Junction of Hill Place to RAF Molesworth

A diversion will be put in place via Fox Road. There will be some noise from the digging activities during these works, and you will see members of our teams working on the public highway behind safety barriers. Our working hours will be Monday to Friday 0800 from 1700. Weekend work may be required from time to time and will be communicated in due course.

Our work should have no impact on your electricity supply.

The remainder of the route towards Kimbolton will be performed under 2-way lights. However, some closure may be required for safety reasons and this will be communicated in due course.

What does the work involve?

The work involves excavating short trenches, beginning at our Brington Substation on the High Street. We will then follow the planned cable route north in short sections to lay pipework (ducts). We will then return at a later date to install a new electricity cable in the ducting and connect to our network. We will then reinstate the carriageway before reopening for public use.

How will I be kept up to date?

We are writing to all affected residents and businesses along the cable route and advanced warning signs will be placed on the B660 prior to any work starting. Members of our site team may also knock on your door should they anticipate any additional disturbances. We have been working with local authorities to best minimise disruption and will continue to work with your Parish Council in keeping residents updated.

Additionally, you can contact our customer care team on **0800 028 4587** or care@ukpowernetworks.co.uk.

Will I still have access to my property?

Access to properties along the route will be maintained at all times and there will be no change to any public services with Emergency services being given priority of access. Footways will remain open as the works are within the carriageway and grass verges.

If you have any specific access concerns or deliveries during any of our work, please speak to a member of our site team, who will happily accommodate your requirements.

Working with other utilities

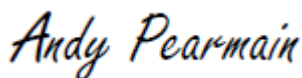

Where possible, we work with other utility services in the same road space to minimise long term disruption to residents, businesses and road users.

During the closure of Brington High Street, Cambridgeshire County Council will be utilising our road space to perform repair works on the current footpath between 11 and 22 August.

We apologise for any inconvenience caused; we have worked closely with the local authority in planning this project and will make every effort to minimise the impact on your neighborhood.

If you have any questions, please contact our customer care team on **0800 028 4587** or care@ukpowernetworks.co.uk.

Yours sincerely

Andy Pearmain
